

Research Assessment Report

Recorded observations and AI-assisted research summary

AI research summary

Analysis of the provided document text and measurements indicates standard laboratory parameters within normal reference ranges alongside documented Vata-Pitta prakriti pattern and Rasa sarata profile.

Recorded Dhatu Sarata observations

Dhatu	Recorded score	Observation points
Rasa	3 / 4	75%

Assessment context

Prakriti pattern	Vata-Pitta pattern
Vikriti observations	Vata: 2 (50%)

Clinical history

Chief complaint	Synthetic verification record
Duration	One week
Presenting symptoms	Sample text for end-to-end verification only.
Associated symptoms	Not recorded
Relevant history	Not recorded
Notes	Not recorded

DEMONSTRATION SAMPLE - FICTIONAL DATA ONLY - NOT FOR CLINICAL USE Sample Laboratory Report Fictional record for PDF upload testing Record DEMO-LAB-001 Collected 14 September 2026 Subject Demo Record - no patient identity Complete blood count Test Result Reference range Hemoglobin 12.8 g/dL 12.0 - 16.0 g/dL RBC 4.5 million/uL 4.0 - 5.2 million/uL WBC 6.8 10^3/uL 4.0 - 11.0 10^3/uL Platelets 252 10^3/uL 150 - 450 10^3/uL Biochemistry Test Result Reference range Fasting glucose 91 mg/dL 70 - 99 mg/dL Creatinine 0.8 mg/dL 0.6 - 1.1 mg/dL TSH 2.1 mIU/L 0.4 - 4.0 mIU/L This document is intentionally fictional and contains no clinical interpretation.

Observed patterns

- Complete blood count parameters including hemoglobin, RBC, WBC, and platelets fall entirely within normal reference ranges.
- Biochemistry markers including fasting glucose, creatinine, and TSH are within standard reference limits.
- Subject exhibits a Vata-Pitta prakriti pattern with a Rasa sarata score of 3 out of 4 (75 percent).

Research focus

- Investigate the correlation between Vata-Pitta prakriti patterns and standard biochemical markers in healthy cohorts.
- Evaluate the relationship between Rasa sarata scoring and complete blood count distributions.
